Mohammad H Ferdosi

A simple method for evaluating the genotype quality of the sire x chromosome using half-sib families *abs# 96*

Karin Meyer

A look at computations for multivariate single-step genomic evaluation fitting the 'hybrid model' *abs# 98*

Eva M. Strucken

SNP-Panel Design for Dairy Proportion Estimation and Parentage Testing *abs# 100*

Mehar S Khatkar

Reconstruction of unknown donor genome from chimeric pearl sac tissue and host genotypes in *pinctada maxima* *abs# 102*

Amin Mohamed

Evaluation of pooled whole genome sequencing (Pool-Seq) to recover known GWAS signals (gene effects) *abs# 104*

Jose Torres-Vazquez

Genetic and phenotypic parameters for feed efficiency traits in Australian Angus Beef Cattle *abs# 106*

Penny K Riggs

Methodology for quantification of circulating cell-free microRNA from bovine plasma for analysis of meat quality traits *abs# 108*

Leo Cummins

No evidence for genes with large effect on twinning in a beef herd with unusually high fecundity *abs# 110*

Laercio Porto-Neto

Linking commercial carcass data to stud herds: the power of genomics *abs# 112*

Marina R S Fortes

Genetics and genomics of bull fertility phenotypes measured as part of the bull breeding soundness evaluation *abs# 114*

Fernanda M. Rezende

Genome-wide mapping of loci affecting semen volume, sperm concentration and total and progressive motilities in boars *abs# 116*

Fernanda S S Raidan

Genetic parameters for alternative measures of fertility in a commercial herd of tropical cows *abs# 118*

Even Poster Listing

Kristian Ridley

Development of a custom Ion AgriSeq Genotyping-By-Sequencing panel based on the ISAG bovine core parentage markers *abs# 120*

Carel Muller

Somatic cell count and milk urea nitrogen levels in holstein and fleckvieh x holstein cows in a total mixed ration feeding system *abs# 122*

Fiona Hely

Integration of ivf technologies with genomic selection to generate high merit ai bulls: a simulation study *abs# 124*

Yizhou Chen

Multi-tissue genome wide expression of mRNA and microRNA in cattle selected for high and low residual feed intake *abs# 126*

Kim L Bunter

Juvenile IGF-I response in INRA RFI selection lines partly reflects changes in post-weaning attributes *abs# 128*

Aaron J McMillan

Weighting of genomic and pedigree relationships in single step evaluation of carcass traits in Australian sheep *abs# 130*

Kim L Bunter

Progesterone is an indirect indicator of reproductive outcomes for yearling ewes *abs# 132*

Schalk Cloete

Genetic parameters for dag- and cover scores of merino ewes divergently selected for number of lambs weaned *abs# 134*

Sam Walkom

Accommodating variable disease challenge on breeding value prediction for sires – using footrot as an example *abs# 136*

Masoud Soltani-Ghombavani

Genetic association of skin thickness with lamb survival from birth to weaning, and growth and wool traits in New Zealand Romney sheep *abs# 138*

Johan C Greeff

Preliminary results on the inheritance of early lamb growth as an indicator for milk production in merino sheep? *abs# 140*

David Jones

Development of a low-density commercial genotyping array for the white legged shrimp, *litopenaeus vannamei* *abs# 142*
